1 **Introduction**

1.1 **General**

1.1.1 All works covered within this document are to be managed and performed to the culture within the Thames Tideway Tunnel vision of ‘Zero Incidents, Zero Harm, Zero Compromise’.

1.1.2 The *Code of Construction Practice (CoCP)* comprises two parts:

   a. Part A: General requirements. These measures are applicable project-wide.

   b. Part B: Site-specific requirements. These are site-specific measures, where there are deviations from the general requirements indicated in Part A.

1.1.3 This document comprises the CoCP Part B for the Thames Tideway Tunnel project works at Blackfriars Bridge Foreshore site and identifies the detailed site-specific measures including working hours, site set up and servicing arrangements, taking into account the environmental issues and consultations with the City of London Corporation and other stakeholders.

1.1.4 For ease of reference the CoCP Part B mirrors the headings in Part A. The CoCP Part B sets out site-specific issues and deviations from Part A so where there are no site-specific measures reference should be made to the measures set out in Part A.

1.1.5 A plan showing the location of the site is shown in the Figure 1.1 below.
Figure 1.1 Blackfriars Bridge Foreshore: Site context and location plan

Note: For detailed Limits of Land to be Acquired or Used, refer to drawings in the Book of Plans.

2 General Requirements

2.0.1 As per text in CoCP Part A.

3 Communications and community/stakeholder liaison

3.0.1 As per text in CoCP Part A. The contractor shall liaise with the City of London Boys School with respect to the works to construct the relocated Blackfriars Millennium Pier.
## 4 Site operation

<table>
<thead>
<tr>
<th>Topic</th>
<th>Site-specific requirement</th>

</table>
| Working hours                 | This site will adhere to the following working hours:  
  a. standard  
  b. extended standard.  
  Other working hours are subject to agreement with the local authority.  
  The contractor is required to engage with the City of London on the planned works, working hours and predicted noise levels, as part of the required construction environmental management plan.  
  It should be noted that the City of London normally restrict noisy work to six hours on weekdays. The works are required to schedule noisy working operations to hours on weekdays (8am to 10am, 12pm to 2pm, 4pm to 6pm), Saturdays 8am to 1pm, with no noisy work on Sundays or Bank Holidays. However, the site is a significant distance from sensitive receptors and standard hours will apply.  
  Other noisy work that may be generated (including deliveries and maintenance) outside of these standard hours need to be the subject of an application to, and agreement by, the City of London. (a 'Site Hours Variation Request' - justifying the work and methods). This includes work categorised in CoCP Part A as extended working hours, continuous working, out of hours, possession working, tidal working and short notice working. |
| Site layout                   | The temporary works construction within the river will minimise the works within the navigational channel. The detailed methods are to be agreed with the Port of London Authority, Environment Agency and Marine Management Organisation subject to required licenses, navigational risk assessments and consents.                                                                                                   |
| Site security / hoarding requirements | The hoarding is to be as defined in CoCP Part A para. 4.3.4a and b incorporating suitable artwork and viewing windows.                                                                                                                                                                                                                         |
| River works                   | As per text in CoCP Part A.                                                                                                                                                                                                                                                                                                                                  |

### Public access, highway and river transport

<table>
<thead>
<tr>
<th>Topic</th>
<th>Site-specific requirement</th>
</tr>
</thead>
</table>
| Site access and gates          | The site access for construction is to be from the new entrance from the westbound ramp leading down from Blackfriars Bridge apart from the period where the low level no1 interception chamber works are undertaken.  
<pre><code>                              | During this construction phase access will shall be from Blackfriars underpass.                                                                                                                                               |
</code></pre>
<p>| Traffic management             | Lorry arrivals are to be strictly controlled and coordinated to set times to ensure that no lorries queue outside of the site.                                                                                                 |
|                                | The westbound ramp can only take standard HGV’s and not abnormal loads.                                                                                                                                                     |
|                                | The area shown for temporary traffic lane closure at the end of the down ramp is to be used only when required. After use, the area is to be restored to highway use. Given notice by the City of London/Transport for London for traffic reasons, the area will shall be restored to traffic as soon as practical after notice. |
|                                | The minimum width of traffic lanes to be retained on the westbound ramp will shall be 3.25m.                                                                                                                                   |
|                                | Prior to suspending any coach parking spaces alternative parking spaces will shall be provided. The coach parking will shall be reinstated on completion of the works unless agreed with the highway authority. It is proposed that subject to the relevant highway consents being obtained the coach parking spaces would be relocated to southbound carriageway of Blackfriars Road (A201) between Webber Street and Westminster Bridge Road/Borough Road (A3202). |
|                                | Existing coach parking and loading bay on the |</p>

<td>westbound ramp and Victoria Embankment (A3211) will/shall be suspended. The duration of works effecting traffic lanes including the ramp closure are to be minimised.</td>
<td></td>
</tr>
<tr>
<td>Event restrictions</td>
<td>The London Marathon. Contractor to take appropriate measures prior to and for the duration of the event, including items such as minimising extent of works within the highway. The contractor shall liaise with City of London, Westminster City Council and TFL Event Planning teams with regard to other major events which may affect Victoria Embankment.</td>
</tr>
<tr>
<td>River transport</td>
<td>The new pier is to be in place before the closure of the existing pier. Access to the existing and relocated pier to be maintained for both pedestrians and services. Liaison with London River Services (Transport for London) is required. A detailed navigational risk assessment is required as part of the River Works License to confirm that the arrangements for river transport from the works are safe and acceptable to the Port of London Authority.</td>
</tr>
<tr>
<td>Other</td>
<td>The diversion of the Thames Path is to be clearly signed. Coordination is required with both City of London and Transport for London on the requirements of amended pedestrian routes to the relocated Blackfriars Pier. This includes notices, pamphlets, guides and signage to the public. The contractor shall attend highways liaison meetings as required by the City of London. The City of London shall provide the contractor with 14 days’ notice of such meeting.</td>
