Site Suitability Reports and Engineering Options Reports

Listed below are historic reports that informed the site selection process for the proposed Thames Tideway Tunnel. These reports are summarised in report 7.05 Final Report on Site Selection process, submitted to the Planning Inspectorate with our application for development consent in February 2013. That report can be viewed on the Thames Tideway Tunnel section of the Planning Inspectorate’s website: http://infrastructure.planningportal.gov.uk/projects/London/Thames-Tideway-Tunnel/

Previously these reports were provided on request. We have received a number of new requests in recent weeks, and are now publishing the reports here.

The process and terminology may not be familiar to all parties. We recommend that reference is made to the Site Selection Methodology Paper or the Final Report on Site Selection Process.

Site Suitability Reports

The Site Suitability Reports were prepared during three periods in the development of the proposed Thames Tideway Tunnel.

The first group of these reports (Spring 2010) were prepared before Phase one consultation. The second group (Summer 2011) were prepared as part of a ‘back-check’ process before Phase two consultation. The final group (Spring 2012) were also prepared as part of a ‘back-check’ process after Phase two consultation and before the start of Section 48 publicity. For some sites the Spring 2010 reports were superseded, so some sites have a subsequent report with a later date.

Engineering Options Reports

Three versions of the Engineering Options Report were prepared during the development of our proposals for the Thames Tideway Tunnel. The first report (Spring 2010) was prepared before Phase one consultation. The second report (Summer 2011) was prepared before Phase two consultation. The final report (Spring 2012) was prepared before the start of Section 48 publicity.
